

DIGITAL PASSPORT ASSIGNMENT

Fluency with digital tools is essential in this course, and a great advantage in the career and college life that lies ahead of you. You will be expected to find information, communicate, and produce mathematics both by going online and using software.

On or before Friday, August 26, please do *all* of the following:

1. Visit the class website, <http://mathlore.net> and look at the various pages there: CM, Rules, Grades, Contact, Reference, and so on. Spend enough time familiarizing yourself with it, so that whenever it is referenced in class you won't be confused.
2. Class notices will be sent using the "Remind" system. Go to <https://www.remind.com/join/lhscm> and choose whether to be notified by cellphone text message, or email. We will be able to communicate through Remind however I will have no record of your phone number or email address, and you can change or delete them at any time. You may use your school email address (*if* you check it) or have it forwarded to a phone or email account that you *do* check. If it's your phone, you can also sign up by texting "@lhscm" to (234) 312-4653.
3. Go to <http://classroom.google.com> and log in with your "@lakewoodcityschools.org" email and sign up for this class "8digu2" – detailed class assignments and notices will be posted and archived here. It is also the place where many class assignments will be turned in.

Anyone who does not participate in our class online is unlikely to succeed. If you have reasons that you feel that you cannot participate online in these ways, you need to discuss them with Mr. Petto *immediately*.
