

Consumer Math “Floor Plan” Mini-Project

The “floor plan” should be your depiction of a 1000 square-foot apartment, in which you imagine you'd enjoy living. You need to make a drawing showing a kitchen, a bathroom, and at least two other rooms.

You need to show all doorways & hallways. You need to show the area of *each* room or space and the total area for the apartment. Other details are optional, but if you include them, it will be to your benefit. Search on the term “floor plan” and look at the images that result — these will give you a good idea of what the drawing should look like. You should also include a table showing the individual areas of each room and the total of these. The project is due on January 22, 2018. If you submit it earlier, I will provide advice and an opportunity to revise and obtain a perfect score. All submissions must be made electronically, in our Google Classroom. You will find some additional advice there. If you have any questions, please ask.
