

Road Trip !!

(Consumer Math vacation-planning project)

Construct *two* possible vacation plans. Organize a report describing these so that it is easy to compare them, and decide which might be best.

Your report should include:

- two drivable destinations (at least one must be outside Ohio)
- the distance from Lakewood to each destination
- the fuel costs you expect to spend going back and forth to each
- your expected travel times
- expected lodging and food costs (be sure be specific and name names)

- plan two days of activities at each destination, including costs (once again: be specific and detailed)

Be sure to include enough detail to justify your computations (your car, its fuel-consumption rate, expected fuel prices, and so on.)

As a conclusion, explain which plan you prefer, and why you have made that choice.

The complete written report is due on or before Friday, May 19, 2017. It must be submitted online, in our Google Classroom.
