

# What's My Line?

calculate important career-choice numbers

1. Choose three desirable jobs
2. Estimate earnings (starting)
3. Find educational requirements
4. Find educational time & cost
5. Estimate job-related costs

Organize your report showing and comparing three alternative career choices. Comparison scheme may be a table, or may be paragraph-style. *You **must** indicate the sources for your information, so that they can be easily double-checked by anyone.*

Detail the education you foresee for each. Clearly show both the time commitment and the cost of the education. Include job-related costs, such as uniforms, tools, and the like, if there are any. *Be sure to tell me your sources for information.*

Look to MathLore.net and our Google Classroom for pointers to a few useful websites. Tell Mr. Petto other good websites as you find them, for a scoring bonus.

The final report is due Wednesday, October 11.

All reports must be submitted electronically to our Google Classroom, and should be typed.
